

ABSTRACT OF THE DISCLOSURE

A method is disclosed for squeezing an input hue, H_{in} , toward a region of preferred hue, H_{pref} , having a preferred chroma, C_{pref} , and luminance, L_{pref} , to restrict the rotation effect to a point in LCH space rather than an entire hue slice. This method involves defining a chroma weight as: $C_{weight} =$
5 Gaussian(C_{pref}, C_{sigma}); defining a luminance weight as: $L_{weight} =$
Gaussian(L_{pref}, L_{sigma}); defining a hue weight as: $H_{weight} = \text{Gaussian}(H_{pref}, H_{sigma})$; defining an amount of hue adjustment as: $H_{Adjust} = \Delta H * (H_{weight} * C_{weight} * L_{weight})$; and finally, generating an output hue by applying hue adjustment to hue input such that: $H_{out} = H_{in} - H_{Adjust}$.
